Alejandro Vega

Backend Software Engineer | Automation & integrations

Bogotá, Colombia
4ledmt.dev · linkedin.com/in/alejandrovega-stackblend · github.com/AlejandroVegaFullstackDev

PROFILE

Backend software engineer with 4 years of experience in fintech, logistics and media. I trained as a programming technician at SENA and I'm now studying Systems Engineering. I specialize in APIs, microservices and integrations, I choose the architecture and tools based on what the business needs, and I plan the work. I use AI across the whole development cycle, with agents like Claude Code and Codex, always with review and tests before production.

EXPERIENCE

Roda — Full Stack Developer

Mobility fintech · Jun 2025 – present · Bogotá

- Built the GPS tracking platform operations uses to follow the fleet on a map, with **NestJS**, **Python** and **Redis**.
- Automated payment, credit and collections processes with **FastAPI** and **Flask** microservices.
- Automated the team's repetitive tasks with the Trello, Notion and Gmail APIs.
- I deploy the services with **Docker** on **GCP** Cloud Run.

Kiki LATAM — Mid-level Software Engineer

Logistics / e-commerce · May 2024 – Mar 2025 · Bogotá

- Built features for the logistics platform in **React** and **NestJS**.
- Automated bulk shipping-label generation, previously done one label at a time, with a **PostgreSQL** procedure.
- Integrated the platform with external carriers through **REST APIs**.
- Automated label rescheduling and Gmail reporting with an AI-assisted flow.

Pulzo — Backend / Data Tracking Developer

Digital media · Oct 2022 – May 2024 · Bogotá · joined as a SENA intern

- Built **Node.js** microservices and an **Angular** front end so HR can manage staff access from a single system.
- Moved the site's audience data into **BigQuery** with **Python** processes and built the sales team's dashboards.
- Started out building interfaces and portal features in **PHP** and **Laravel**.

PROJECTS

- **Support Triage** · github.com/AlejandroVegaFullstackDev/support-triage: **Microservices** in **NestJS**, **FastAPI** and **React**, connected through **RabbitMQ**, with an agent that classifies tickets using **OpenAI** and **Claude** LLMs.

TECHNICAL SKILLS

- **Languages:** TypeScript, JavaScript, Python, SQL, PHP, Java and C# / .NET (personal and academic projects)
- **Frameworks:** NestJS, Node.js, Express, FastAPI, Flask, Laravel, React, Next.js, Angular, Astro, Tailwind
- **Databases:** PostgreSQL, MySQL, Redis, BigQuery
- **Architecture & principles:** microservices, REST APIs, SOLID, design patterns, clean architecture, hexagonal, KISS, YAGNI, RabbitMQ
- **Cloud & DevOps:** CI/CD, GitHub Actions, Docker, deployment on GCP (Cloud Run) and Vercel, AWS, Linux
- **Testing:** Jest, pytest, PHPUnit, Selenium
- **AI:** LLM integration (OpenAI, Claude), Claude Code, Codex, OpenCode, ChatGPT, DeepSeek, local models (Qwen, Whisper)
- **Tools:** Git, GitHub, GitLab, Power BI, Power Apps, Looker Studio, Scrum, Kanban
- **Soft skills:** working directly with operations and business teams, autonomy to take a module from start to finish, technical documentation written for its reader

EDUCATION AND LANGUAGES

- **Systems Engineering**, UNIMINUTO (in progress) · **Software Programming Technician**, SENA (2021 – 2022)
- **Languages** — Spanish (native) · English B1 (certified), working toward B2
